death issue, as well.

For men and women, if the **Orgasmic Wave Energy (click her for the wave pathways)** is powerful enough to run up to the brain/pituitary, sexual orgasm can power up the endocrine/immune function for more hGH, DHEA and testosterone productions to promote health. To obtain the benefits of sexual orgasm, the orgasmic wave energy must pass through the scattering of the periodic structure of the sternum (female) or the periodic structure of the spinal cord (the male) to reach the brain's central nervous system and endocrine command center - the hypothalamus and pituitary.

In addition, orgasm promotes testosterone burning and prevent the heart from the overloading of testosterone, leading to the reduction of the heart attack or the sympathetic heart function.

Thus, it strengthens the cardiovascular, endocrine/immune, and nervous functions, leading to longevity.

Frequent orgasm increases your level of the orgasm hormone Oxytocin. The oxytocin level is linked to the personality, passion, social skills and emotional quotient (EQ), all of which affects your carrier, marriage, emotion and social life.
